SUMMARY

Software Engineer with 1.5+ years of professional experience in cloud-native infrastructure across AWS and GCP, specializing in Kubernetes, Terraform, CI/CD, Linux administration, observability, security, and compliance. Experienced in building and supporting production environments, improving deployment reliability, and optimizing cost and performance. Skilled in Terraform, Terragrunt, Docker, GitHub Actions, GitLab CI, Jenkins, ArgoCD, Prometheus, Grafana, Datadog, Vault, GKE, EKS, Vertex AI, OAuth, and RAG-based AI workloads. Contributed to HIPAA and SOC 2 compliance readiness through audit support, access reviews, secrets management, and secure infrastructure practices.

SKILLS AND INTERESTS

- **Programming Languages** : C++, Python, SQL, Bash Scripting
- **Cloud Platform** : AWS (EC2, EKS, ECS, Lambda, Aurora, DynamoDB, S3, API Gateway, Route 53, CloudWatch, IAM, VPC, ELB, Transit Gateway), GCP (GKE, Compute Engine, Cloud Monitoring, Vertex AI, IAM, Cloud Storage, Cloud Run, Cloud Logging)
- **Containers and Orchestration** : Docker, Kubernetes, Helm, ArgoCD, GitOps
- **CI/CD and Automation** : GitHub Actions, GitLab CI, Jenkins
- **Monitoring and Observability** : Prometheus, Grafana, Datadog, Google Cloud Monitoring
- **Security and Compliance** : Vault, Secret Manager, OAuth, IAM, HIPAA, SOC 2, PCI-DSS, audit support, access control
- **Monitoring & Observability**: Prometheus, Grafana, Datadog, Google Cloud Monitoring
- **Infrastructure as Code** : Terraform, Terragrunt

EXPERIENCE

Revent Labs | Software Engineer Jan 2025 - Present

- Architected and deployed CI/CD workflows using **GitLab CI and Github Actions** integrated with AWS EKS and also GCP Cluster, enhancing deployment automation and improving system observability through Datadog and Temporal Cloud, which accelerated deployment speed by 40%.
- Provisioned and managed scalable cloud infrastructure using Terraform and **Terragrunt**, implementing modular Infrastructure as Code (IaC) practices that accelerated environment setup by 50% and ensured consistent deployments across development, staging, and production.
- Designed and maintained comprehensive monitoring and real-time alerting systems with Prometheus, Grafana, and Google Cloud Monitoring, reducing Mean Time to Detect (MTTD) by 40% and resolving issues to improve overall system reliability.
- Administered and debugged **Kubernetes** clusters using kubectl and K9s, ensuring high availability, performance tuning, and efficient workload management.
- Streamlined multi-environment application delivery by integrating Helm, Docker, and GitOps into the CI/CD pipeline, enabling rapid, repeatable deployment and improving system uptime.

Flairsoft Consulting Group | SDE Intern June 2024 - July 2024

- Maintained .NET applications, automating build and deployment pipelines using **Jenkins and GitHub** for efficient version control and collaboration.
- Worked with the development team to gather requirements, perform testing, and enhance **GIS integration** functionality of company, resulting in a 30% improvement in data analysis and visualization.

PROJECTS

End-to-End DevOps Pipeline for Flask Application | Gitlab CI, AWS(EKS, EC2), Docker Dec 2024

- Developed and deployed a Flask-based web application containerized with Docker, ensuring consistent and reproducible environments across development, testing, and production, leading to a 30% reduction in environment-related deployment issues.
- Orchestrated Kubernetes (K8s) deployments, services, and Ingress controllers, increasing application scalability and uptime by 25% while improving overall traffic management efficiency.
- Developed an efficient, end-to-end automation pipeline leveraging GitLab CI for continuous integration and automated testing, achieving a 40% reduction in deployment time and boosting rollout reliability by 35%.
- Integrated Docker image build and tagging within the CI workflow, achieving a 40% reduction in deployment time by streamlining container version management and delivery.

PerceptionPro - Unstructured Data Intelligence  | ML, Vader, Flask, API, Git, MySQL April 2023

- Built and managed a robust CI/CD pipeline with GitLab CI to automate the build, testing, and deployment of containerized applications on Kubernetes, cutting deployment time by 60% and ensuring consistent delivery.
- Collected user feedback using **API** such as Tweepy(Twitter) and PRAW (Reddit) to iteratively improve the system by 30%, incorporating user suggestions and addressing any usability issues.
- The platform displays sentiment data through interactive **graphs and timestamps**, enhancing the understanding of content perception, enabling 20% improvement in data-driven decision-making.
- Increased the efficiency of analysis for authorized users by 70% enabling faster and more data-driven decision-making.

EDUCATION

Lakshmi Narain College of Technology Excellence (LNCTE), Bhopal
Bachelor of Technology in Computer Science and Engineering - Data Science
